Assembling a Grow Tent (Generic Instructions)

Assemble the tent in an open, uncluttered area large enough to completely open, and lay out, the tent cover.

Simplified Assembly Instructions

- Carefully open the packaging.
- Count all poles and match to parts list.
- Count all connectors and match to the parts list
- Set aside the Floor Pan. It will not be used until later.
- Unzip all zippers on the tent cover completely.
    - Lay the tent cover out flat. (The floor will be at the bottom of a "t" shape.)
- Assemble the frame of the tent in the floor of the unit using included assembly instructions.
- Pull the roof of the tent cover (at the top of the "t") over the assembled frame.
    - Straighten the corners of the tent cover, pulling the flap down and around the roof of the frame.
    - Zip the right and left doors half closed, creating the side walls.
    - Pull left and right door flaps back to rear, top, outside corners and secure with the provided Hook and Loop (Velcro) straps.
- Place the floor pan inside the tent floor and secure at the corners with the provided zip ties, twine, or string.

Your tent has approximately a 150 lbs. load capacity.

- If your tent includes drop down accessory poles:
    - Hang your grow light hoods, filters, etc. from these poles.
- If your tent does not include drop down accessory poles, only straight stability poles:
    - Do not hang your grow lights, filters, etc. from these stability poles. Only hang from the load bearing frame poles.

Ports

- The smaller accessory ports are generally used for electrical and water connections.
- The larger ports are generally used for air flow ducting.
    - Close off ports when not in use for maximum airflow and light integrity.
